NAVAL DISPERSAL FACILITIES, NORTH KOREA**ABSTRACT**

1. This report contains information on naval dispersal facilities in North Korea and describes the associated naval order-of-battle. This information is derived from KEYHOLE photography obtained between September 1974 and May 1976.
2. Included in this report are a location map, four photographs, and a table.

INTRODUCTION

3. Prior to late 1974, naval combatants in North Korea were berthed and supported at a limited number of major operational bases/facilities along both coasts. In a continuing effort to enhance the survivability of its forces, a new program of facility construction, apparently designed for the dispersal of small combatants, has been identified.

BASIC DESCRIPTION

4. Ten areas have been identified as naval dispersal facilities (Figure 1 and Table 1). The function of these facilities appears to be primarily combatant dispersal rather than support and maintenance of the vessels.

5. Several of these facilities consist solely of a marine railway in an isolated area (Figures 2 and 3). Other facilities consist of one to three buildings, some quayage or floating pier section, and a marine railway/transverser (Figures 4 and 5). None of these facilities demonstrate the total features usually associated with major naval bases/facilities in North Korea.

Associated Naval Order of Battle

6. The Nampo LATC (small armored troop carrier), Chaho PTFS (fast-fire support boat), Chongjin PGM (motor gunboat) (Figure 4), and Sinhung PT (motor torpedo gunboat) have been observed at or near the dispersal facilities within the last 18 months.
